

## **Transfer Phenomena** **(TPPA - Ist Year of study, IInd Semester)**

**Credit value (ECTS) 4**

### **Course category**

Fundamental (Mandatory)

### **Course holder:**

**Iuliana MOTRESCU, Lecturer Ph.D.**

### **Discipline objectives (course and practical works)**

The aim of the course is to have students acquire knowledge on the fundamental transport phenomena and laboratory analysis techniques. The students will be able to understand the physical phenomena of heat, mass and impulse transfer, which explain some industrial and biological processes.

Practical works seek to familiarize students with basic measurements and experiments, data collection and interpretation of the results. Students will develop practical skills and knowledge on transport phenomena and transfer operations, applying energy, mass and force conservation laws, with implications in food science and biotechnology.

### **Contents (syllabus)**

<b>Course (chapters/subchapters)</b>
<b>Vector calculus.</b> Gradient. Divergence. Rotor. Interpretation and applications
<b>Transport phenomena.</b> General introduction.
<b>Heat transfer.</b> Introduction. Conduction. Convection. Forced convection. Thermal radiation. Phase change. Transfer phenomena with phase change. Complex heat transfer phenomena. Global heat exchange.
<b>Mass transport.</b> Basic concepts. Molecular diffusion. Fick's laws. Similarities between transfer phenomena. Mass transfer in gas-liquid, liquid-solid, and liquid-liquid systems. Operations with substance transfer. Applications.
<b>Momentum transport.</b> Basic concepts. Momentum transfer on one direction. Ideal fluids. Fluid dynamics. Viscosity of fluids. Newton's law. Newtonian and non-Newtonian fluids. Reynolds number. Bernoulli's equation. Pipe flow.

<b>Practical works</b>
<b>Vector calculus and applications</b>
<b>Measuring the surface tension using the stalagmometer</b>
<b>Measuring the relative viscosity with Oswald viscometer</b>

<b>Measuring the dynamic viscosity with Oswald viscometer</b>
<b>Measuring the dynamic viscosity based on Stokes`law</b>
<b>Study of the thermal radiation. Stefan-Boltzman`s law</b>
<b>Study of the thermocouple</b>
<b>Measuring the specific heat of solids</b>
<b>Measuring the specific heat of water</b>
<b>Measuring the adiabatic index</b>
<b>Applications of heat transport</b>
<b>Applications of mass transport</b>
<b>Applications of momentum transport</b>
<b>Final laboratory evaluation</b>

### **Evaluation**

<b>Evaluation form</b>	<b>Evaluation Methods</b>	<b>Percentage of the final grade</b>
Exam	Written examination	70%
Appreciation of the activity during the semester	Oral assessment during the semester, verification tests and laboratory colloquium.	30%
