

Microbiology (Ist Year of study, IInd SEMESTER)

Credit value (ECTS) 3

Course category

Domain (Optional)

Course holder:

Assoc. Prof. PhD. Florin-Daniel LIPȘA

Discipline objectives (course and practical works)

The aim of the course is to have students acquire knowledge on taxonomic descriptions, morphological characters and physiological behavior of the main groups of microorganisms that have practical implications. Students will also study the physico-chemical and biological development of microorganisms and metabolic behavior based on physiological particularities and growth conditions.

Practical training will familiarize students with technical work in microbiology laboratories and knowledge of general notions relating to taxonomy, morphology, physiology and reproductive particularities of the main groups of microorganisms with implications in food science and biotechnology.

Contents (syllabus)

Course (chapters/subchapters)
The object of study, the history and the importance of microbiology.
Prions.
Viruses: definition and general particularities; nature and origin of viruses; overall structure of the virus; classification, cultivation and identification of viruses; multiplication of viruses: the relationship virus - host cell; bacteriophages, cyanophages, micoviruses, viroids.
Bacteria: nomenclature, taxonomy, morphology, size, cell structure, chemical composition of bacterial cell, energy metabolism, respiration, nutrition, growth and multiplication. Particular groups of bacteria.
Diatoms: morphology, anatomy, nutrition, breeding and taxonomy.
Protozoa: morphology, anatomy, nutrition, breeding and taxonomy.
Fungi: morphology, anatomy, nutrition, breeding and taxonomy.
Soil Microbiology: role of microorganisms in the formation and evolution of organic matter; Microbiological theory of the formation of humus; various microbial activity of soils; soil microbial profile.
Influence of ecological factors on microorganisms: effect of pH; influence of temperature; influence of water; the influence of radiant energy; influence the mineralogical composition of the soil.
Ecological interrelationships between organisms: interrelations between populations of soil microorganisms: methabiosis, antagonism and symbiosis; Interrelations between soil microorganisms and higher plants: spermatosphere, rhizosphere; Mycorrhiza; Interrelations between fungi and plants in the case of mycorrhiza.

The role of microorganisms in achieving biological circuits in nature:

- Nitrogen cycle: biological nitrogen fixation, ammonification, nitrification, denitrification.
- Carbon cycle: the degradation of carbohydrates, hemicelluloses, starch, pectin, cellulose and lignin.
- The contribution of microorganisms to achieve biological circuits of sulfur, phosphorus, potassium, calcium, iron and manganese.
- Circuit of biological trace elements.

Practicum

The presentation of the General Microbiology laboratory; work safety rules; Laboratory equipment and utensils; good practice working in microbiology.

Optical microscope Leica DM500. Microscopic measurements.

Sterilization: Sterilization methods in microbiology, sterilization by physical and chemical agents.

The technique of cultivation of microorganisms: Seeding with a Pasteur pipette, with a loop, and seeding in Petri dishes.

The conduct of microscopic examination: examination of blade-slide preparations, in suspended drop; technical execution of a smear.

Morphology of bacteria: colorful preparations examination after simple coloration technique; Gram coloration.

Morphology of fungi: examination of blade-slide preparations or in suspended drop.

Determining the number of microorganisms per gram of soil

Examining of aerobic and anaerobic free nitrogen fixing bacteria

Examining of molecular nitrogen symbiotic fixing bacteria

Exam of cellulolytic microorganisms

Final colloquium of knowledge evaluation

Evaluation

Evaluation form	Evaluation Methods	Percentage of the final grade
Exam	Oral examination	60%
Appreciation of the activity during the semester	Oral assessment during the semester, verification tests and final laboratory colloquium.	40%
